Southport, U.K. – 26th August 2014

iFi shatters the mould with EISA award

iFi is very pleased to announce that the nano iDSD has won the EISA 2014-2015 Best Product in the Hi-Fi Accessory category.

EISA (European Imaging and Sound Association) is the most prestigious consumer electronics association in Europe and spans the globe. Perennially, the electronics giants are always there - iFi being only a two years “young” company, is pleasantly surprised by this award.

The EISA citation reads:

“Beautiful sounds can certainly come from very small packages, as iFi’s nano iDSD serves to demonstrate. This USB DAC is powered via an internal Lithium battery that’s charged via the connected USB hub on a PC or Mac, offering up to 10 hours of playing time with most headphones or via the RCA line outputs. The single USB input confers compatibility with the highest resolution music files including 32-bit/384kHz DXD and quad-speed DSD256 and will even play DSD files directly from a mobile phone (iOS/Android) or iPad using a third-party App. The specification includes precision, temperature-compensated clocks and a bespoke headphone amp rated at 80mW but it’s the impressively sweet and insightful sound that is the nano iDSD’s most memorable feature. This has to be the hi-fi bargain of the year!”
